

OpenStax Textbooks for TEAS Coverage

Downloaded Textbooks

Textbook	TEAS Area	File Size	Local Path
Anatomy and Physiology 2e	Science (A&P)	455 MB	textbooks/Anatomy-and-Physiology-2e.pdf
Concepts of Biology	Science (Life Science)	147 MB	textbooks/Concepts-of-Biology.pdf
Chemistry 2e	Science (Physical Science)	208 MB	textbooks/Chemistry-2e.pdf
Prealgebra 2e	Math (Numbers & Algebra)	63 MB	textbooks/Prealgebra-2e.pdf
Elementary Algebra 2e	Math (Algebra)	58 MB	textbooks/Elementary-Algebra-2e.pdf
Introductory Statistics 2e	Math (Data Interpretation)	23 MB	textbooks/Introductory-Statistics-2e.pdf
Writing Guide with Handbook	English & Language Usage	61 MB	textbooks/Writing-Guide-with-Handbook.pdf

Total: 7 textbooks, 1.0 GB

Download Notes

- All PDFs downloaded from openstax.org
- Anatomy & Physiology 2e is the largest at 455 MB — this is expected for a comprehensive A&P textbook with detailed medical illustrations
- Writing Guide with Handbook is available as a web book with PDF download — both formats are useful (web for content extraction, PDF for reference)

Not Available / Skipped

Textbook	Reason
College Algebra 2e	

Textbook	Reason
	Skipped — Prealgebra + Elementary Algebra provide sufficient coverage for TEAS-level math; College Algebra exceeds TEAS scope
University Physics	Skipped — TEAS Science focuses on A&P and basic scientific reasoning, not university-level physics
Dedicated Reading textbook	Does not exist on OpenStax — TEAS Reading is covered through exam-specific strategies rather than textbook content

TEAS Coverage Map

Reading (28% of exam)

- No dedicated OpenStax textbook needed
- Coverage approach: exam strategy and practice questions rather than content study
- Key skills tested: identifying main ideas, summarizing, following directions, interpreting graphics

Mathematics (26% of exam)

- **Numbers & Operations:** Prealgebra 2e (Ch. 1-4)
- **Algebra:** Prealgebra 2e (Ch. 5-9) + Elementary Algebra 2e (Ch. 1-5)
- **Measurement & Data:** Introductory Statistics 2e (Ch. 1-2 for basic concepts)
- **Pre-algebra content is sufficient** for ~80% of TEAS Math; Elementary Algebra covers the rest

Science (32% of exam — highest weight)

- **Human Anatomy & Physiology (≈70% of Science):** Anatomy and Physiology 2e — primary resource
- **Life & Physical Sciences (≈15%):** Concepts of Biology + Chemistry 2e
- **Scientific Reasoning (≈15%):** Practice and strategy, no specific textbook needed

English & Language Usage (14% of exam)

- Writing Guide with Handbook covers grammar, sentence structure, punctuation, vocabulary
- No separate vocabulary textbook needed — TEAS tests contextual word meaning, not memorization

TEAS Coverage Gaps

1. **Reading Comprehension Strategies** — No OpenStax textbook teaches how to identify main ideas, make inferences, or follow multi-step directions. This is typically covered by exam prep materials, not content textbooks.
2. **Scientific Reasoning** — OpenStax textbooks teach science content, not how to evaluate hypotheses or interpret scientific studies. This gap is best filled with practice questions.
3. **TEAS-Specific Math Word Problems** — OpenStax algebra textbooks teach concepts but don't include the multi-step word problem format that TEAS uses. Practice questions needed.
4. **No College-Level Reading Textbook** — OpenStax has no reading comprehension textbook. The "College Reading and Writing" content was folded into the Writing Guide with Handbook, which focuses on writing, not reading comprehension.

Recommendations

- **Primary study path:** A&P 2e (Science) → Prealgebra + Elementary Algebra (Math) → Writing Guide (English)
- **Secondary resources:** Biology and Chemistry for science depth, Statistics for data interpretation questions
- **Gaps to fill with custom content:** Reading strategies, scientific reasoning, TEAS-format practice problems
